

ISRAEL ADIGUN

adigun.jolly@gmail.com | (414) 275-4042 | [GitHub](#) | [Portfolio](#)

Software engineer building full-stack applications with React, C++, Python, Java, Node.js, Django, AWS, SQL and MongoDB.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, C, PHP, SQL
- **Frontend:** React, Redux, HTML, CSS, responsive UI
- **Backend:** Node.js, Express, Django, REST APIs, WebSockets, JWT authentication, RBAC
- **Databases & Cloud:** PostgreSQL, MongoDB, AWS S3, AWS EC2
- **Tools & Practices:** Git, CI/CD, Agile, data structures, algorithms, system design

WORK EXPERIENCE

Software Contributor | Postbrief.dev | Austin, TX

Apr 2026 - Present

- Contributing to an automation-focused developer productivity tool, shipping reliable, maintainable features across the web application.

Production Associate | Boston Scientific | Maple Grove, MN

Jul 2025 - Feb 2026

- Met 100% daily production targets on a 50-person line while maintaining quality inspection standards in a regulated manufacturing environment.
- Followed ISO-13485 processes, documentation expectations, and quality procedures; adapted to 20+ weekly priority changes without disrupting team output.
- Identified process improvement opportunities that helped reduce defects and improve operational efficiency.

Undergraduate Research Assistant | University of Wisconsin | Milwaukee, WI

May 2023 - Oct 2023

- Applied semantic segmentation techniques to distinguish and isolate cellular structures, contributing to biological image analysis workflows
- Collaborated with research lead to ensure segmentation consistency across microscopy image datasets.

PROJECT EXPERIENCE

Real-Time Chat

Jan 2024

- Built TypeScript React and Node.js chat application with JWT authentication, WebSockets, Redux state management, and AWS S3 media storage.
- Migrated JavaScript codebase to TypeScript, adding stricter types across frontend state and Express middleware to reduce runtime risk and improve maintainability.
- Implemented real-time image previews and secure uploads using Multer and AWS S3; supported 50+ concurrent users during testing without noticeable lag.

Account Management

Sep 2024

- Led 5-person team building Django web application for educational organizations to manage users, courses, sections, and administrative workflows.
- Implemented authentication, role-based access control, and course/section CRUD features; designed relational database schema to keep entities organized and extensible.
- Coordinated sprint planning, task breakdown, and team delivery under deadlines while maintaining readable, documented code.

EDUCATION

Bachelor of Science in Computer Science | University of Wisconsin

May 2025
