OBJECTIVE

Recent Computer Science graduate with internship experience in Software development and a solid foundation in data structures, algorithms, and systems design. Proven ability to write clean, efficient code using Python and modern frameworks. Eager to contribute to scalable backend services and collaborate with a fast-paced, high-growth team.

EDUCATION

University of Wisconsin
Bachelor of Science in Computer Science

May 2025
GPA: 3.4

TECHNICAL SKILLS

Programming Languages: C, Java, Python, TypeScript, PHP

Frameworks and Tools: ReactJS, Django, Git, AWS, MongoDB, SQL, Web APIs, CSS, HTML, Nodejs

CS Fundamentals: Data Structures, Algorithms, System Design, Problem Solving, Team Collaboration

PROJECT EXPERIENCE

Account Management Web App | Lead Full-Stack Developer

Sep 2024 – March 2025

- Led a team of five to develop an account management platform for educational organizations using Django as the core framework for the back-end architecture.
- Implemented secure user authentication system role-based access control and designed the database schema enabling users to efficiently manage courses and sections.

Real-Time Chat Messaging | Application Developer

Jan 2023 – Apr 2023

- Developed a Reactjs chat app with JWT authentication, supporting 50+ concurrent users via WebSockets.
- Integrated with MongoDB to persist data ensuring consistency and efficient querying.

WORK EXPERIENCE

Frontend Development Intern | University of Wisconsin

Sept 2024 –Apr 2025

- Maintained responsive web interfaces using Typescript, ensuring seamless user experiences.
- Worked with cross-functional teams to integrate user feedback from immersion trips, enhancing application usability for clients in healthcare or education.

Software Development Intern | Epic Systems

Jun 2023 – May 2024

- Developed and maintained web applications using modern frameworks and languages such as JavaScript/React, and Python/Django, ensuring high performance and scalability.
- Collaborated with developers to implement secure, user-friendly features, including authentication systems and database-driven functionalities.
- Wrote and executed unit tests for frontend (ReactJS) and backend (Django) components to ensure robust functionality.
